Many business sectors have been, and are being, forced to compete with new competitors-disrupters of some sort-who have found new ways to create and deliver new value for customers often through the use of technology that is coupled with a new underlying production or business model, and/or a broad array of partners, including, in some cases, customers themselves. Think about the disruption created by Apple by the introduction of the iPod and iTunes, and by Netflix within the entertainment sectors using partners within the ecosystem; think of Uber that didn't build an app around the taxi business but rather built a mobility business around the app to improve customer experience. Airline Industry considers whether the airline industry is poised for disruptive innovations from inside or outside of the industry. Although airlines have a long history of continuous improvements and innovation, few of their innovations can be classified as disruptive innovations. The few disruptive innovations that did emerge were facilitated, for example by new technology (jet aircraft) and government policy (deregulation). Now there are new forces in play-customers who expect to receive products that are more personalized and experience-based throughout the entire journey, new customer interfaces (via social media), advanced information systems and analytics, financially powerful airlines based in emerging nations, and the rise of unencumbered entrepreneurs who think differently as well as platform-focused integrators.

Many business sectors have been, and are being, forced to compete with new competitors-disrupters of some sort-who have found new ways to create and deliver new value for customers often through the use of technology that is coupled with a new underlying production or business model, and/or a broad array of partners, including, in some cases, customers themselves. Think about the disruption created by Apple by the introduction of the iPod and iTunes, and by Netflix within the entertainment sectors using partners within the ecosystem; think of Uber that didn't build an app around the taxi business but rather built a mobility business around the app to improve customer experience. Airline Industry considers whether the airline industry is poised for disruptive innovations from inside or outside of the industry. Although airlines have a long history of continuous improvements and innovation, few of their innovations can be classified as disruptive innovations. The few disruptive innovations that did emerge were facilitated, for example by new technology (jet aircraft) and government policy (deregulation). Now there are new forces in play-customers who expect to receive products that are more personalized and experience-based throughout the entire journey, new customer interfaces (via social media), advanced information systems and analytics, financially powerful airlines based in emerging nations, and the rise of unencumbered entrepreneurs who think differently as well as platform-focused integrators.

This book provides a flight plan for riding the impending connectivity transformation curve. It takes the perspective of actionability, highlighting initiatives that executives in airlines and related businesses can use from the insights of multi-industry executives. The emphasis is on execution, not on the concepts themselves. There is a cluster of at least four distinct megatrends that may converge to form disruptive conditions: (1) elevated expectations of existing and new customer segmentations, those who expect available and accessible air mass transportation systems, and those who expect connected services and seamless travel on different modes of transportation; (2) new emerging technology, incorporated in the air and ground vehicles, that will create new opportunities for existing and new service providers to offer new value propositions; (3) platforms developed around the ecosystem of customers; and (4) the impact on travel that the fast-changing demographic and economic characteristics of two major countries: India and China. These megatrends could lead existing or new businesses to create value propositions specifically dedicated to the new segments once each reaches a critical mass. Drawing on the author's own experience in the airline industry and related businesses, this book discusses the "how", relating to reimagining the business, re-entrepreneuring the organization, innovating through partnerships, reengaging with customers and employees, and rebranding the business in response to these trends. This book is recommended reading for all senior-level practitioners of airlines and related businesses worldwide.

In 21st Century Airlines: Connecting the Dots, Nawal Taneja addresses the challenges and opportunities facing the airline industry as it tries to innovate and create products and services that are radically different by 'connecting the dots' at four key levels: recognizing the implications of global events, improving cross-functional collaboration within the organization, working more closely with the travel chain, and providing much higher engagements with connectors within the social networks. The book synthesizes insights gained from the experience of non-traditional businesses, such as Uber, that have no physical assets and that focus on scalability through platforms, as well as traditional businesses, such as Mercedes-Benz, that are transitioning from operators of physical assets to adapt to the on-demand and sharing economies. These insights show pragmatically that digitizing airline businesses would require digital mind-sets, digital technologies, digital strategies, and digital workplaces to explore new frontiers in value for both customers and airlines. Moreover, forward-thinking airlines need to consider working with bimodal organizational structures, in which one group optimizes current business models (network, fleet, and schedule planning, as well as revenue management) while a second group explores innovative ways to add digital features to physical products to provide a consistent experience throughout the journey. The book is written for all senior-level practitioners of airlines and related businesses worldwide, as well as senior-level government policymakers.

The COVID-19 pandemic represents an extraordinary inflection point that caught airlines worldwide unprepared, causing CEOs to recalibrate their business models. This book explains why this unprecedented pandemic is different from the past disruptions experienced by the airline industry during the past 50 years, and what airlines and related businesses now can do to adapt to the dramatically changed marketplace. This book presents two future scenarios: continuous improvements and elastic supply. These are considered in three specific contexts for the rebuilding of the airline business. These contexts, in the order of urgency with respect to change from the status quo, are the following. The first context is for airlines to become better prepared to deal with frequent and deeper disruptions that could be localized or globalized relating to such areas as climate change, geopolitics, and cybersecurity. The second context is to collaborate and integrate within the much broader travel ecosystem, possibly using platforms to innovate on new value systems. The third context, which has always been the case and drives the first two, is for airlines to offer real solutions to people's travel needs, solutions developed with imagination and turbocharged innovation, even as we contemplate new technology airplanes and mobility as a service solutions. This book is recommended reading for all senior-level practitioners of airlines and related businesses, as well as aviation policy makers worldwide.

Companies from startups to corporate giants face massive amounts of disruption today. Now more than ever, organizations need nimble and responsive leaders who know how to exploit the opportunities that change brings. In this insightful book, Jean Dahl, a senior executive and expert in the Lean mindset and its methods, demonstrates why you need to embrace Modern Lean principles and thinking to redefine leadership in this age of digital disruption in order to continuously evolve the Lean enterprise. Drawing on nearly three decades of corporate and consulting experience, Ms. Dahl lays out a new holistic framework for developing Modern Lean leaders. Through personal experiences and compellingreal-world case studies, she explains specific steps necessary for you and your company to proactively understand and respond to change. Understand the leadership challenges Lean leaders face in our 21st century global economy Explore the six dimensions of the Modern Lean Framework] Learn and apply the nine steps necessary to become a Lean leader Use Modern Lean methods to build a culture of continuous learning that can be sustained and maintained within your organization Seize competitive advantage by embracing Modern Lean to tbuild an enterprise that understands how to respond to disruption

Airline business models continue to be shaped by powerful forces relating to customers, complexities and regulators. However, at the same time, there are emerging technologies that can help airlines cater to the needs of their changing customer bases and manage the complexities of the business. In his previous books, Nawal Taneja has deliberated on these forces and how the airline industry is poised for disruptive change that could come from within or outside of the industry. He also discussed the point that the airline planning systems and process in use are neither contemporary nor sufficiently integrated to meet the changing needs of customers who now are looking for outcomes, not products. In Re-platforming the Airline Business: To Meet Travelers' Total Mobility Needs, Taneja not only reiterates the need for transformation of the airline business but provides a map of the transformational process. This book proposes that different sectors of the aviation industry, particularly airlines and airports, should consider using not just a wide array of technologies (Artificial Intelligence, biometrics, blockchain, and the Internet of Things), but also specifically-designed customer-centric platforms to make informed decisions and to develop and implement transformative strategies to meet travelers' total mobility needs. These technologies and platforms can enable airlines and airports to achieve scale and scope as well as agility and flexibility (through strategic partnerships) to offer intelligently aggregated travel-related services right now. Subsequently, they will enable various members in the travel chain to provide solutions to travelers' global mobility requirements, effectively and with better experiences.

This open access book is an important reframing of the role of innovation in agriculture. Dr. Campos and his distinguished coauthors address the need for agriculture to feed a growing global population with a reduced environmental footprint while adapting to and mitigating the effects of changing climate. The authors expand the customary discussion of innovation in terms of supply driven R&D to focus on the returns to investors and most importantly, the value to end-users. This is brought to life by exploring effective business models and many cases from agricultural systems across the globe. The focus on converting the results of innovation in R&D into adoption by farmers and other end-users is its greatest contribution. Many lessons from the book can be applied to private and public sectors across an array of agricultural systems. This book will be of enormous value to agri-business professionals, NGO leaders, agricultural and development researchers and those funding innovation and agriculture across the private and public sectors. Tony Cavalieri, Senior Program Officer, Bill & Melinda Gates Foundation Hugo Campos, Ph.D., MBA, has 20+ years of international corporate and development experience. His distinguished coauthors represent a rich collection of successful innovation practice in industry, consultancy, international development and academy, in both developed and developing countries."

This book constitutes the refereed conference proceedings of the Second International Conference on Emerging Technologies in Computing, iCEtIC 2019, held in London, UK, in August 2019. The 24 revised full papers were reviewed and selected from 52 submissions and are organized in topical sections covering blockchain and cloud computing, security, wireless sensor networks and Internet of Things, (IoT), FinTech, AI, big data and data analytics.
