After evaluating investigative and autopsy information of the mother and her two children, the authors identified the case as maternal suicide with double filicide. Three years before this event ...

This multidisciplinary volume assembles current findings on violent crime, behavioral, biological, and sociological perspectives on its causes, and effective methods of intervention and prevention. Noted experts across diverse fields apply a behavioral criminology lens to examine crimes committed by minors, extremely violent offenses, sexual offending, violence in families, violence in high-risk settings, and crimes of recent and emerging interest. The work of mental health practitioners and researchers is shown informing law enforcement response to crime in interrogation, investigative analysis, hostage negotiations, and other core strategies. In addition, chapters pay special attention to criminal activities

that violate traditional geographic boundaries, from cyberstalking to sex trafficking to international terrorism. Among the topics in the Handbook: · Dyadic conceptualization, measurement, and analysis of family violence. · School bullying and cyberbullying: prevalence, characteristics, outcomes, and prevention. · A cultural and psychological perspective on mass murder. · Young people displaying problematic sexual behavior: the research and their words. · Child physical abuse and neglect. · Criminal interviewing and interrogation in serious crime investigations. · Violence in correctional settings. · Foundations of threat assessment and management. The Handbook of Behavioral Criminology is a meticulous resource for researchers in criminology, psychology, sociology, and related fields. It also informs developers of crime prevention programs and practitioners assessing and intervening with criminal clients and in correctional facilities.

Mothers and Others finds the key in the primatologically unique length of human childhood. Renowned anthropologist Sarah Hrdy argues that if human babies were to survive in a world of scarce resources, they would need to be cared for, not only by their mothers but also by siblings, aunts, fathers, friends—and, with any luck, grandmothers. Out of this complicated and contingent form of childrearing, Hrdy argues, came the human capacity for understanding others. In essence, mothers and others teach us who will care, and who will not.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Behavior Analysis and Learning, Fifth Edition is an essential textbook covering the basic principles in the field of behavior analysis and learned behaviors, as pioneered by B. F. Skinner. The textbook provides an advanced introduction to operant conditioning from a very consistent Skinnerian perspective. It covers a range of principles from basic respondent and operant conditioning through applied behavior analysis into cultural design. Elaborating on Darwinian components and biological connections with behavior, the book treats the topic from a consistent worldview of selectionism. The functional relations between the organism and the environment are described, and their application in accounting for old behavior and generating new behavior is illustrated. Expanding on concepts of past editions, the fifth edition provides updated coverage of recent literature and the latest findings. There is increased inclusion of biological and neuroscience material, as well as more data correlating behavior with neurological and genetic factors. The chapter on verbal behavior is expanded to include new research on stimulus equivalence and naming; there is also a more detailed and updated analysis of learning by imitation and its possible links to mirror neurons. In the chapter on applied behavior analysis (ABA), new emphasis is given to contingency management of addiction, applications to education, ABA and autism, and prevention and treatment of health-related problems. The material presented in this book provides the reader with the best available foundation in behavior science and is a valuable resource for

advanced undergraduate and graduate students in psychology or other behavior-based disciplines. In addition, a website of supplemental resources for instructors and students makes this new edition even more accessible and student-friendly ([www.psypress.com/u/pierce](http://www.psypress.com/u/pierce)).

The 2020 UNODC Global Report on Trafficking in Persons is the fifth of its kind mandated by the General Assembly through the 2010 United Nations Global Plan of Action to Combat Trafficking in Persons. It covers more than 130 countries and provides an overview of patterns and flows of trafficking in persons at global, regional and national levels, based primarily on trafficking cases detected between 2017 and 2019. As UNODC has been systematically collecting data on trafficking in persons for more than a decade, trend information is presented for a broad range of indicators.

This book delves into problem solving, one of the core components of dialectical behavior therapy (DBT). The authors are leading DBT trainers who elucidate the therapy's principles of behavior change and use case examples to illustrate their effective application. Particular attention is given to common pitfalls that therapists encounter in analyzing target behaviors--for example, a suicide attempt or an episode of bingeing and purging--and selecting and implementing appropriate solutions. Guidelines are provided for successfully implementing the full range of DBT problem-solving strategies, including skills training, stimulus control and exposure, cognitive restructuring, and contingency management.

In contrast to the widely held assumption that terrorists are crazed fanatics, Jerrold Post demonstrates they are psychologically "normal" and that "hatred has been bred in the bone". He reveals the powerful motivations that drive these ordinary people to such extraordinary evil by exploring the different types of terrorists, from national-separatists like the Irish Republican Army to social revolutionary terrorists like the Shining Path, as well as religious extremists like al-Qaeda and Aum Shinrikyo. In *The Mind of the Terrorist*, Post uses his expertise to explain how the terrorist mind works and how this information can help us to combat terrorism more effectively.

Women who kill rupture our assumptions about what a woman is. This book explores different socio-cultural understandings of women who commit, or are accused, of murder. A wide range of cases are discussed in order to highlight the ways in which such women have been perceived, and how such cases reflect important social and cultural shifts.

Dr Albert P Cardarelli (University of Massachusetts, Boston) and Dr. Charles Wellford (University of Maryland, College Park) opened the conference by presenting their research to help illuminate the consequences of unsolved murders and the variables that have contributed to the decline in clearance rates. Their research revealed that the changing nature of crime, the decentralisation of police departments, and the rise in gang violence have all had an impact on the effectiveness of homicide investigations. Law enforcement executives, academics, attorneys, and federal government representatives addressed the different effective strategies that have been developed to combat these problems, including various management and personnel decisions, videotaping suspect interviews, considering the availability of eyewitness identification options (simultaneous line-ups versus sequential line-ups), DNA analysis, and using cold case units and crime analysts to increase clearance rates. Case studies presented at the conference highlighted both the strengths and weaknesses associated with various investigation techniques. A town hall forum allowed attendees to discuss variables that contribute to an effective homicide unit. A lively discussion ensued, with participants mainly focusing on the role of science and technology, specifically how technology may at first appear to complicate the process but ultimately assists law enforcement by fostering change and improving investigational methods.
