Historically organised at a local or national scale, the fields of medicine and healthcare are being radically transformed by new communication, transport and biotechnologies creating, in the process, a genuinely globalised sphere of biomedical production and consumption. This emerging market is characterised by the circulation of bodily materials (tissues, organs and bio-information), patients and expertise across what traditionally have been relatively secure ontological and geographical borders. Crossing both disciplinary and geographical boundaries, this volume draws together a number of important contributions from acknowledged leaders in three respective fields: the trade in bodily commodities, biomedical tourism and migration of health care professionals. It explores and maps out the key characteristics of this emerging, although as yet poorly researched global trade, questioning how, where and why bodies cross borders, whether this exacerbates existing health inequalities and how these circulations impact on healthcare services. Considered together, the chapters in this volume invite comparisons of the ways in which body parts, patients and medical professionals cross national borders, elucidating common themes, concerns and issues. Contributors also pose important questions about the ethical and legal implications of the circulation of bodies across borders and evaluate current and future strategies for regulation.

Globalization is often thought of as an abstract process that happens "out there" in the world. But people are ultimately the driving force of global change, and people have bodies that are absent from current conversations about globalization. The original scholarly research and first-person accounts of embodiment in this volume explore the role of bodies in the flows of people, money, commodities, and ideas across borders. From Zumba fitness classes to martial arts to fashion blogs and the meanings of tattooing, the contributors examine migrating body practices and ideals that stretch across national boundaries.

Historically organised at a local or national scale, the fields of medicine and healthcare are being radically transformed by new communication, transport and biotechnologies creating, in the process, a genuinely globalised sphere of biomedical production and consumption. This emerging market is characterised by the circulation of bodily materials (tissues, organs and bio-information), patients and expertise across what traditionally have been relatively secure ontological and geographical borders. Contributors also pose important questions about the ethical and legal implications of the circulation of bodies across borders and evaluate current and future strategies for regulation.

The book Our Bodies, Ourselves is a feminist success story. Selling more than four million copies since its debut in 1970, it has challenged medical dogmas about women ' s bodies and sexuality, shaped health care policies, energized the reproductive rights movement, and stimulated medical research on women ' s health. The book has influenced how generations of U.S. women feel about their bodies and health. Our Bodies, Ourselves has also had a whole life outside the United States. It has been taken up, translated, and adapted by women across the globe, inspiring more than thirty foreign language editions. Kathy Davis tells the story of this remarkable book ' s global circulation. Based on interviews with members of the Boston Women ' s Health Book Collective, the group of women who created Our Bodies, Ourselves, as well as responses to the book from readers, and discussions with translators from Latin America, Egypt, Thailand, China, Eastern Europe, Francophone Africa, and many other countries and regions, Davis shows why Our Bodies, Ourselves could never have been so influential if it had been just a popular manual on women ' s health. It was precisely the book ' s distinctive epistemology, inviting women to use their own experiences as resources for producing situated, critical knowledge about their bodies and health, that allowed the book to speak to so many women within and outside the United States. Davis provides a grounded analysis of how feminist knowledge and political practice actually travel, and she shows how the process of transforming Our Bodies, Ourselves offers a glimpse of a truly transnational feminism, one that joins the acknowledgment of difference and diversity among women in different locations with critical reflexivity and political empowerment.

Globalization is often thought of as an abstract process that happens "out there" in the world. But people are ultimately the driving force of global change, and people have human bodies that are absent in current conversations about globalization. The original scholarly research and first-person accounts of embodiment in this volume explore the role of bodies in the flows of people, money, commodities, and ideas across borders. From Zumba fitness classes to martial arts to fashion blogs and the meanings of tattooing, the contributors examine migrating body practices and ideals that stretch across national boundaries.

This book tracks the conceptual journeying of the term ' transgender ' from the Global North—where it originated—along with the physical embodied journeying of transgender asylum seekers from countries within Africa to South Africa and considers the interrelationships between the two. The term 'transgender' transforms as it travels, taking on meaning in relation to bodies, national homes, institutional frameworks and imaginaries. This study centres on the experiences and narratives of people that can be usefully termed 'gender refugees', gathered through a series of life story interviews. It is the argument of this book that the departures, border crossings, arrivals and perceptions of South Africa for gender refugees have been both enabled and constrained by the contested meanings and politics of this emergence of transgender. This book explores, through these narratives, the radical constitutional-legal possibilities for 'transgender' in South Africa, the dissonances between the possibilities of constitutional law, and the pervasive politics/logic of binary ' sex/gender ' within South African society. In doing so, this book enriches the emergent field of Transgender Studies and challenges some of the current dominant theoretical and political perceptions of 'transgender'. It offers complex narratives from the African continent regarding sex, gender, sexuality and notions of home concerning particular geo-politically situated bodies.

The area of investigation covered in this volume deals with mode and means through which humans form and develop meaningful relationships

Contributors: Barbara Baird, Niklas Barke, Anna Bogic, Hayley Brown, Lori A. Brown, Cathrine Chambers, Ewelina Ciaputa, Gayle Davis, Mary Gilmartin, Agata Ignaciuk, Sin é ad Kennedy, Lena Lennerhed, Jo-Ann MacDonald, Colleen MacQuarrie, Jane O'Neill, Clare Parker, Christabelle Sethna, Sally Sheldon

Florida without Borders: Women at the Intersections of the Local and Global highlights the problems facing women around the world by featuring papers that explore women ' s activism across borders regarding gender and human rights, issues regarding women and poverty, globalization, economic value of immigrant labor, militarism and human trafficking. Also discussed are the opportunities and obstacles women face when they act to counter the negative impact of these forces. This anthology is a collection of essays by feminist scholars and students who examine discourses on border crossings, political and cultural censorship, gendered codes of conduct, prescribed behavior for women and the activism that emerges to address identity formation, to advance contested meanings and to build coalitions. Throughout the essays, the authors investigate the concepts of the gendered body in the context of global activism, the uses of women ' s bodies in domestic, military, and sexual service, and the breaching of the body ' s borders and boundaries in the project of feminist social change.
