bottom of the window. A list of Update & Security options will now appear in the left-hand pane.

How to Factory Reset Windows 10
A hardware reset or hard reset of a computer system is a hardware operation that re-initializes the core hardware components of the system, thus ending all current software operations in the system. This is typically, but not always, followed by booting of the system into firmware that re-initializes the rest of the system, and restarts the operating system. Hardware resets are an essential part of the power-on process, but may also be triggered without power cycling the system by direct user in

A 'hard reset' is the means to force a PICAXE to respond to a download. If the PICAXE is waiting for certain commands to complete (irin, kbin, serin, long pause commands and similar) the download request may not always be detected. Initiating a 'hard reset' will cause the PICAXE to restart, let it see the download request and consequently download the new program.
