Figure 1. Turbo Boost Pressure Sensor Series 50G. This device is a pressure sensor that sends an electrical signal to the ECM. The ECM uses this information to compute the amount of air entering the engine. Fuel supply is regulated by the TBS information to control engine air fuel ratio. The TBS information is also used to control ignition timing.

Series 50 - Detroit Diesel Engine
Troubleshooting

The Series 50 Engines require a system to smooth the vibrations that are inherent in all four-stroke engines of inline, four cylinder configuration. Two counterweighted balance shafts rotate at
