Pt 1 Digital Instrumentation And Control Systems

Digital Instrumentation and Control The Instrumentation and Controls (I&C) systems of a nuclear power plant (NPP) function as the "nervous system" of the plant. They provide operators with critical safety information on plant operation, allow operators to control various plant safety systems during routine operations, and automatically protect the reactor core during potential accident events.

It focuses on eight areas: software quality assurance, common-mode software failure potential, systems aspects of digital instrumentation and control technology, human factors and human-machine interfaces, safety and reliability assessment methods, dedication of commercial off-the-shelf hardware and software, the case-by-case licensing process, and the adequacy of technical infrastructure.

Digital Instrumentation and Control Systems in Nuclear ... Instrumentation and Control Systems addresses the basic principles of modern instrumentation and control systems, including examples of the latest devices, techniques and applications in a clear and readable style. Unlike the majority of books in this field, only a minimal prior knowledge of

Instrumentation and Control Systems | ScienceDirect

At the same time, a number of vendors of instrumentation and control began to reduce their support of the analog equipment, which in turn gave additional practical impetus to the use of digital systems. The nuclear industry has not been alone. Many other safety-critical industries extensively utilize digital systems.

The rotating data acquisition is accomplished using telemetry systems that have to fulfill extremely high mechanical and thermal requirements. Despite these restrictions, an increasing number of measurement positions have to be recorded simultaneously with a very high bandwidth to resolve oscillations up to 50 kHz or even more.

Instrumentation Control System. These functions are normally provided by, alarm, protection (trip, interlocks and emergency shutdown), and process control systems. These engineered systems are individually and collectively described as control systems, and may be independent, or share elements such as the human interface, plant interface, logic, utilities, environment and management systems.

What is Instrumentation Control System ...

Instrumentation is a field of study and work centering on measurement and control of physical processes. These physical processes include pressure, temperature, flow rate, and chemical consistency. An instrument is a device that measures and/or acts to control any kind of physical
