The purpose of this project was to organize the variables associated with the hospital readmission of patients with heart failure (HF) into a usable framework to inform clinical practice and facilitate administrative decision making. An integrated, systematic review of the literature was used as the ...

**Evidence-based factors in readmission of patients with---**

Heart failure means that the heart is unable to pump blood around the body properly. It usually occurs because the heart has become too weak or stiff. It's sometimes called congestive heart failure, although this name is not widely used nowadays. Heart failure does not mean your heart has stopped working.
