children? Until recently, traditional understandings of human development held that a child's development is universal and that children have characteristics and skills that develop independently of cultural processes. Barbara Rogoff argues, however, that human development must be understood as a cultural process, not simply a biological or psychological one. with cross-cultural research to examine phenomena such as the transfer of culture between generations and the universality of attachment theory. Drawing on detailed research from a range of cultural groups, leading international researchers consider the impact of social change and modernization on the development of the individual and at the societal level. Theoretical and methodological issues are presented in terms of how to apply the results of cross-cultural research as well as recent empirical research done in specialized areas of the field. Finally, short-term intercultural exchanges are examined and used to suggest some of the potential practical uses of cross-cultural research for the future. This book will be essential reading for anyone studying or researching in cultural psychology, cross-cultural psychology, acculturation or behavioral development. It will also prove an invaluable source of information for anyone interested in sociology and the social sciences in general.

This book brings together the latest research on positive psychology from an international cast of researchers and particularly from the growing body of European researchers.
