 (b) For $z_1 = d$ and $d = f$, we have the object illuminated by a normally incident plane wave and situated in the front focal plane. Again $z_2 = f$.

Introduction To Fourier Optics, Third Edition, Problem ...

Fourier optics is the study of classical optics using Fourier transforms, in which the waveform being considered is regarded as made up of a combination, or superposition, of plane waves. It has some parallels to the Huygens–Fresnel principle, in which the wavefront is regarded as being made up of a combination of spherical wavefronts whose sum is the wavefront being studied. A key difference is that Fourier optics considers the plane waves to be natural modes of the
