Inhalers. These small, handheld devices deliver a puff of medicine into your airways. There are three basic types: Hydrofluoroalkane inhalers (HFA, formerly metered dose inhaler or MDI)

## **COPD Devices: Nebulizers and Inhalers (MDI and DPI)**

An inhaler is a device used to deliver medicine to the lungs and airways. It is mainly used to treat or prevent diseases of the airways such as asthma, chronic obstructive pulmonary disease (COPD) or cystic fibrosis.. By getting medicine directly to the lungs, smaller doses of medicine are needed and it can start working more quickly.
