documentation

Setting New Index to the Data Frame. If we need to change the name of the indices, that is, the rows and columns of the data frame, then we can do it very easily in pandas with the

# Download Free Python

`set_index()` method.

Let's see an example. You can do the same with columns as well.

Don't forget to add `axis=1` while dealing with columns. Data Clean-Up using Pandas

## Python: Retrieve the Index of the Max Value in a List ...

The Python web site provides a Python Package Index (also known as the Cheese Shop, a reference to the Monty Python

# Download Free Python

script of that name).

There is also a search page for a number of sources of Python-related information.

Failing that, just Google for a phrase including the word "python" and you may well get the result you need.

Since there are 9 elements in our list ([0] through [8]), attempting to access `my_list[9]` throws an `IndexError: list index out of range`, since it is actually trying to get the tenth element, and there isn't one. Python also allows you to index from the end of the list using a negative number,

# Download Free Python

where `[-1]` returns the last element. This is super-useful since it means you don't have to programmatically find out the length of the iterable in order to work with elements at the end of it.
